

Unveiling Digital Secrets:

Investigating Identity Documents through Digital Forensics

Deniss - Bogdan ONOFREI - RIZA
Head of Forensic Laboratory

INVESTIGATION – COMPUTERS

Due to the limited processing resources, the multitude of CPU architectures, and the variety of protected operating systems, the recovery of the evidence in a computer system is a complex process.

INVESTIGATION – MOBILE DEVICES

The data collection, investigation, and evaluation from a mobile device are the main operations that allow the identification and interpretation of potential evidence stored internally.

INVESTIGATION – NETWORKS

Network artifacts allow the detection and analysis of malicious code, confidential information, cyber-attacks, breaches of copyright agreements, and so on.

INVESTIGATION – CLOUD DATA

The development of acquisition techniques and efficient analysis of evidence from the Cloud platforms are essential elements for the process of data recovery.

DATA RECOVERY

Data recovery in Digital Forensics is crucial for uncovering evidence, reconstructing digital trails, and solving cybercrime.

ENCRYPTED DEVICES AND DATA

The development of proprietary solutions and modules is an essential process that aids the digital investigations of data and encrypted devices.

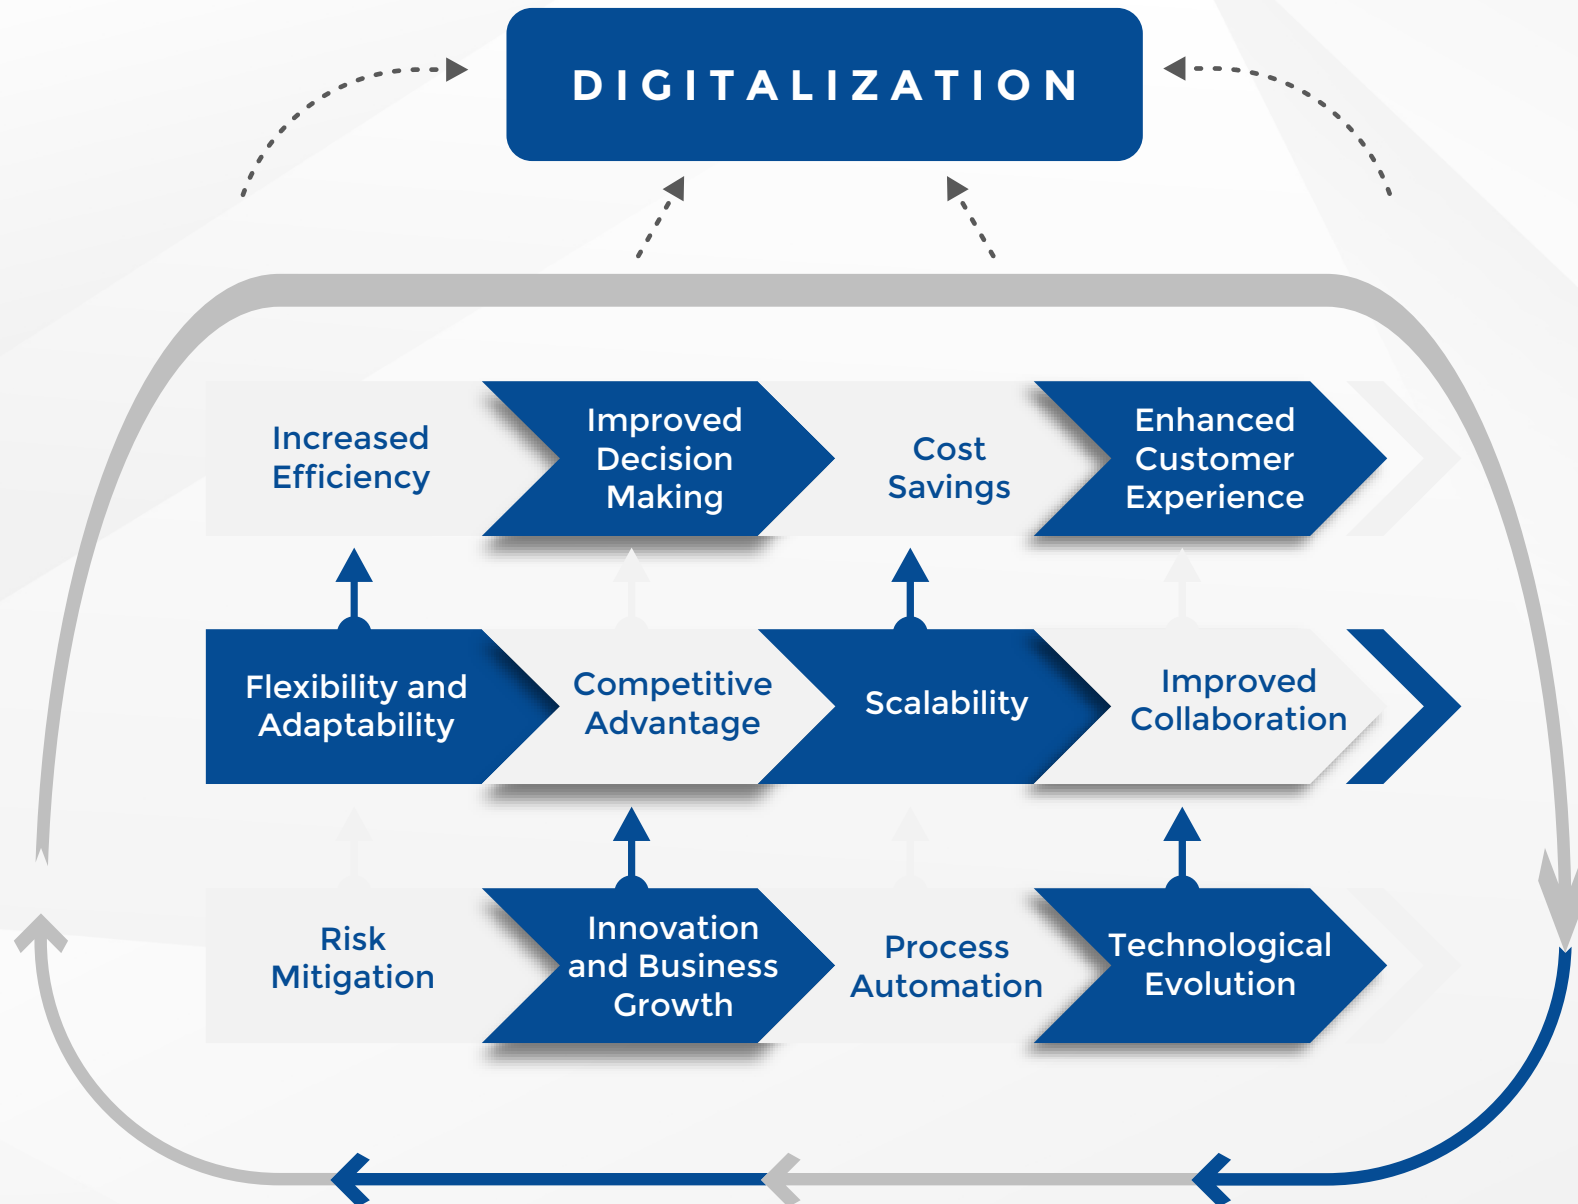

INVESTIGATION – SOCIAL NETWORKING APPS

The investigation of messaging services (desktop or mobile) is a vital component of digital forensics to detect cyber attacks or cyberstalking.

CREDENTIALS RECOVERY

Credentials recovery is a vital process that allows investigators to access essential information and protected digital evidence.

National Identification Document / Passport / Driver's licenses EU Identification Document / Non-EU Identification Document

Custom privacy engine®

Dedicated authenticity verification module

VIZ and MRZ Full international support

More than 174 countries coverage

Translation for top 129 world's most spoken languages

Real-time international translation of all identified elements

Works on IDs, passports, driver's licenses, and much more

- Dedicated engine able to create custom digital forms

- Cross platform custom developed product

- Self developed connectors for external databases

- Customized alerts and metrics (Stegano[®])

- Frequently updated (Application, Database, AI algorithms)

- Easy to use/ intuitive and customizable

- Attendance feature (in/out)

Dedicated engine able to create custom digital forms
